Teacher Preferences for Alternative School Site Administrative Models

Dr. Paul M. Hewitt

Dr. John C. Pijanowski
University of Arkansas

Public school teachers with high leadership potential who stated that they had no interest in being a school principal were surveyed on their attitudes about six alternative school site administrative organizational models. Of the 391 teachers surveyed, 53% identified the co-principal model as the preferred school site administrative structure. In order of preference were; co-principal model, the principal / business manager model, the multi-principal model, the principal / associate principal model, the principal teacher / principal administrator model, and the principal / educational specialist model.

Among teachers at the elementary, middle and secondary levels the only significant difference was on the multi-principal model which was favored more by middle and high school teachers than the elementary teachers. The findings suggest that teachers who had previously stated a lack of interest in becoming school principals might be interested in the position if the organizational structure of the school site was different than the traditional organizational model.

Keywords: Co-principal; school site administration; school site organization; school administration alternatives.
