

SWOSU Sayre Students Enjoying Renovated Chemistry Lab

09.02.2010

Southwestern Oklahoma State University at Sayre students and employees are enjoying a newly-renovated chemistry lab and work is underway on another major project that will convert a classroom into an interactive video classroom.

The chemistry lab in the Alexander Building has been remodeled into a state-of-the-art facility that will house classes in geology, biology and chemistry. Dr. Jim James, dean of the Sayre campus, said the renovated lab will increase the kinds of experiments the students can perform and greatly enhance their educational experiences.

Another project that will assist students is the classroom conversion to an interactive video classroom. The ITV courses remain very popular on the Sayre campus and work is expected to be completed sometime during the current fall semester.

Other recent improvements include automatic exterior door openers being installed on many of the campus buildings.
